

Business Objective

- The client wanted a system to reduce the planning cycles.
- The client wanted a system to collect data from multiple sources and store it in a central repository
- They required accurate reports to meet the statutory requirements.
- A system to take care of their functional requirements with a standard configuration.
- The client wanted to generate multiple budgets from the system.

Client

- The client is a political subdivision and a public corporation. It operates to provide drinking water and natural gas systems to the region in which it is present. It is the only public corporation in the region

Industry

- Utilities

Function

- Finance

Technology

- BPC 11.1

Solution

- As the first step, the TekLink Team reviewed the existing business processes.
- BPC Starter Kits were leveraged to accelerate the implementation and incorporate the best practices.
- Data Extraction from BW and other processes were automated to reduce the overall manual efforts.
- Allocation processes were also automated.
- We developed the logic to calculate depreciation for the new asset requests.
- We also built the system for easy track additions, report on the bond funding sources, and make their reporting self-sufficient

Outcomes and Benefits

- Faster implementation and cost savings were achieved with the use of TekLink's Starter Kits.
- Using BPC as a central data repository eliminates the need for reconciliation and improves accuracy.
- Automation of the processes helped reduce planning cycles.
- The TekLink Team provided detailed documentation of the business processes.
- The recordings of the training and knowledge transfer sessions are available for any new member of the client team.
